

Extract Me if You Can: Abusing PDF Parsers in Malware Detectors

APR 25TH, 2016

[论文下载](#)

这篇文章发表在NDSS 16上，作者是Syracuse University的Curtis Carmony。这篇文章里，作者针对PDF的malware，对Adobe Reader做了个javascript提取工具，来自动化地提取恶意PDF里的javascript。然后作者分析了现有PDF病毒分析工具存在的缺陷，并总结了一些PDF javascript的混淆方法，来绕过PDF病毒分析工具和杀软。最后，作者提出了一些应对的措施，来加强PDF病毒的检测。

背景

Signature-based malicious PDF detectors

基于特征值和哈希来判断PDF是否是恶意的。

Metadata and Structural Features Based Detection

- 基于对PDF文件结构的分析，来判断PDF是否是恶意的。
- PDF Malware Slayer和PDFrate都使用了机器学习的方法，Random Forest，对PDF文件结构进行分类学习。攻击者可以伪造PDF的文件结构来bypass这类检测器。

JavaScript Based Detection

- 基于对PDF文件里的javascript代码，进行分析，来判断PDF是否是恶意的。
- MDScan会解析并提取出PDF里面的javascript代码，然后在一个改过的js引擎里执行，并进行检测。
- PJScan用机器学习的方法，One-Class SVM，来判断js代码是否是恶意的。
- MPScan直接hook了Adobe Reader的js引擎，在执行过程中判断是否执行的恶意行为。

TABLE I: Existing PDF Classifiers

Technique	Detectors	Detection Capability	Parser Requirement	Evasion Techniques
Signature-based	AV Scanners Shafiq et al. [31]	Varies	Low - Medium	Malware Polymorphism [16], [17], [34]
Metadata & Structure -based	PDF Malware Slayer [29] PDFrate [32] Šrndić and Laskov [38]	Medium	Medium	Mimicry Attack [39], [38] Reverse Mimicry Attack [28]
JavaScript-based	Liu et al. [25] MDScan [37] PJScan [23]	Varies	High	

Reference Javascript Extractor

作者认为，只有Javascript-based检测器比较有前途，然而，现在的这类检测器的实现都存在许多问题。作者认为，怎么提取出PDF文件里面的javascript代码是个很重要的问题。

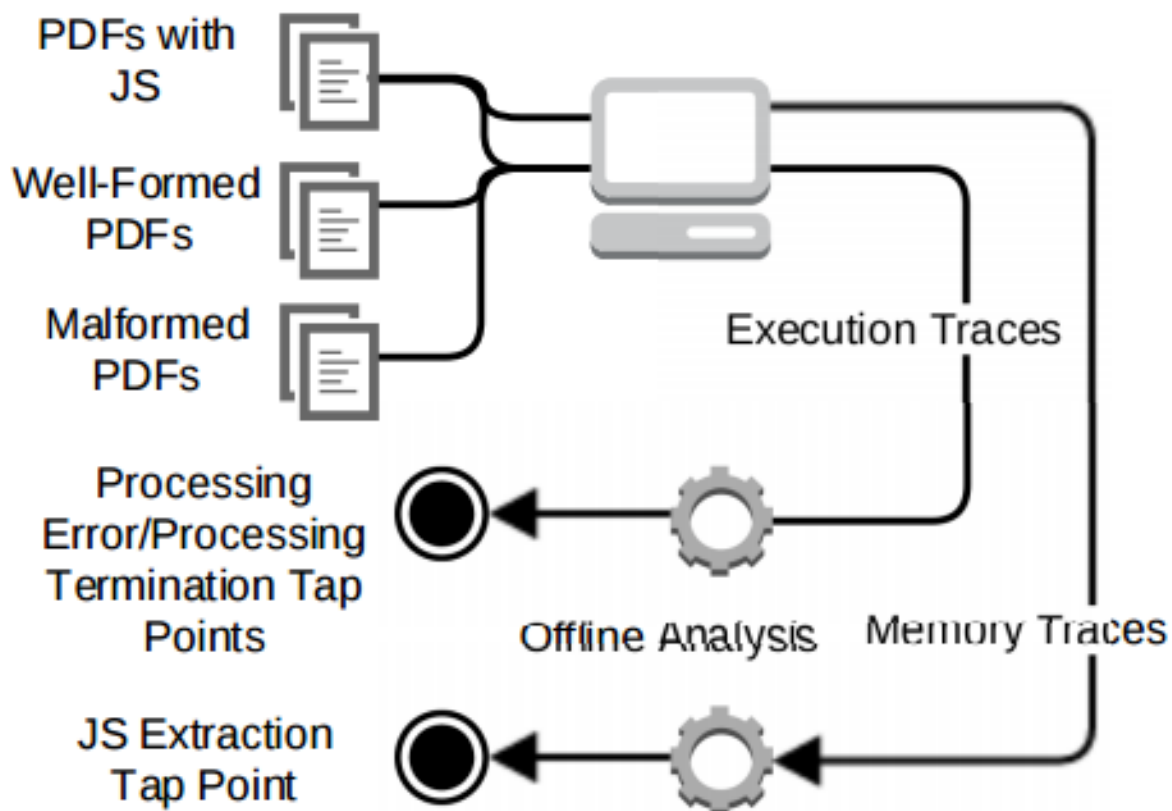

Fig. 1: Tap Point Identification.

Reference Extractor是基于TZB实现的一个工具，TZB（Tappan Zee (North) Bridge: Mining Memory Accesses for Introspection）是一个基于Panda的污点分析工具。作者记录下Adobe Reader解析PDF文件的指令序列，然后进行分析。作者使用了三种输入：有JS的PDF，正常的PDF，Malformed PDF。分别记录下解析它们的指令序列。然后线下分析，找出三个Tap Point：JS提取完成的点，Adobe Reader进程正常结束的点，进程异常退出的点。对第一个Tap Point，作者对每条内存读写指令记录下：

$m = (caller, program_counter, type, data, addr)$

然后把内存地址连续的操作归类。

Algorithm 1 Contiguous Memory Operation Identification

```

1:  $M \leftarrow [m_0, m_1, \dots, m_n]$ 
2:  $WQ \leftarrow$  an empty list of  $g$ 
3: for each memory operation  $m$  in  $M$  do
4:   if  $m.type = read$  then
5:     if  $\exists g \in WQ \mid g.end + 1 = m.addr$  and  $g.caller = m.caller$  then
6:        $Extend(g, m)$ 
7:     else if  $\exists g \in WQ \mid g.start \leq m.addr \leq g.end$ 
and  $g.caller = m.caller$  then
8:        $WQ.move\_to\_front(g)$ 
9:     else  $\#m$  falls out of all  $g$  in  $WQ$ .
10:       $g_{new} \leftarrow CreateNewGroup(m)$ 
11:       $WQ.add\_to\_front(g_{new})$ 
12:    end if
13:  else  $\#m$  is a write.
14:    if  $\exists g \in WQ \mid g.start \leq m.addr \leq g.end$  then
15:       $WQ.remove\_and\_save(g)$ 
16:    end if
17:  end if
18: end for

```

然后，匹配每组内存中的数据，是否包含javascript的关键字。如果存在，就说明提取出了javascript，把调用这些指令的函数设成Tap Point。

对后两类Tap Point，作者分别记录下ETJS，ETWF，ETMF，分别表示有JS的PDF，正常的PDF，Malformed PDF对应的指令集合。

正常退出的Tap Point指：

- 1 在ETWF里，the basic block is always executed once and only once
- 2 不在ETMF里
- 3 在ETJS里，只出现在Javascript Tap Point之后

异常退出的Tap Point指：

- 1 在ETMF里，the basic block is always executed once and only once
- 2 不再ETWF里

后续执行时，遇到Tap Point时，作者用Microsoft Detours library来做一系列操作。

Evaluation

TABLE II: JavaScript Extractions

	Version 9.5.0					Version 11.0.08				
	Reference Extractor	libpdfjs	jsunpack-n	Origami	PDFiD	Reference Extractor	libpdfjs	jsunpack-n	Origami	PDFiD
Total	4397	4625	5053	4508	4398	4704	4625	5053	4508	4398
Matches	-	3940	4247	3863	3721	-	4269	4537	4167	3904
Invalid (ben./mal.)	-	7 (7/0)	26 (10/16)	23 (0/23)	-	-	0 (0/0)	16 (0/16)	23 (0/23)	-
Zero (ben./mal.)	-	450 (20/430)	124 (113/11)	511 (76/435)	676 (253/423)	-	435 (6/429)	151 (140/11)	514 (80/434)	800 (377/423)
Inconclusive	-	356	500	318	677	-	356	500	318	494

Reference Extractor是作者的提取工具。Matches指的是其他工具提取的javascript和作者的一样；Invalid指的是提取出来的javascript不一样；Zero指的是作者的工具有提取出了javascript，但别的工具没有提取出来；Inconclusive指的是其他工具提取出来了但作者的工具有没有提取出来。

TABLE VIII: Average Runtime

Tool	Avg. Runtime (s)
libpdfjs	0.05
jsunpack-n	0.78
Origami	1.86
Reference JS Extractor	3.93

开源PDF分析工具存在的问题

TABLE IV: Failings and Limitations

		Affected Extractors		
		libpdfjs	jsunpack-n	Origami
Implementation Bugs	Comment in trailer	✗	✗	✓
